

RIPPLE *pendant light*

403-RIP

Featuring cross-laminated bamboo construction with powder-coated steel elements, the 'Ripple' light is a high impact visual centrepiece.

Although it's form was inspired by the construction of lighthouse lenses from the mid 1800s, it utilises a state of the art LED filament bulb.

The light's aesthetics were created with the principle of constructing a three dimensional form using a two dimensional substrate.
